IDgenetix
PGx Testing

Your genes may hold the key to mental health medication selection

Unlock the power of personalized medicine tailored to you

Are you struggling to find a mental health medication that works **for you?**

IDgenetix pharmacogenomics (PGx) testing may help

People respond to medications differently[1-3]

Many factors affect individual response to medications. Unique genetic makeup, other medications, and lifestyle factors such as smoking or taking common over-the-counter drugs may all have an impact.

Trial and error often doesn't work very well[4,5]

For many patients, the journey to finding the right treatment can be long, hard, and discouraging, as they try multiple prescriptions over many months or years, and still may not find the medication that works for them.

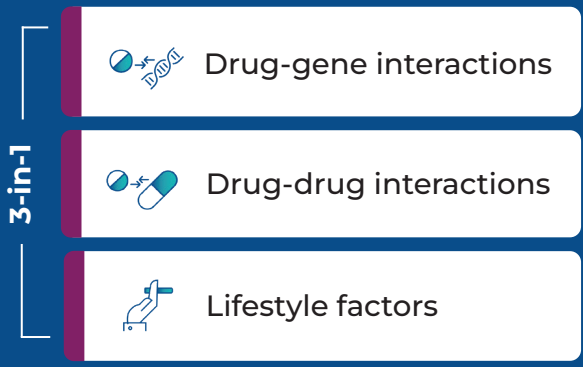
PGx can provide guidance to help find the right mental health medications for you

By looking at your unique genetic profile, PGx can help identify medications that might work best for you.

Your personalized prescription for mental health medication

IDgenetix testing looks at your genes, along with other relevant factors, to help your doctor develop a personalized medication profile, just for you.[6]

IDgenetix considers three key factors that can affect medication response:



IDgenetix results provide valuable information to you and your doctor to guide next steps

- Understand why some medications may not have worked for you
- Select a new medication with higher likelihood of success
- Consider various options such as adjusting doses, or adding or subtracting medications from your current regimen

IDgenetix PGx testing coverage and patient costs

Insurance type	Expected out-of-pocket cost to patient*
Commercial insurance	**Typically $0-$330** Coverage varies by plan; patient cost subject to applicable co-pay, co-insurance, and deductible amounts
Medicare (Part B)	**$0**
Medicare Advantage (Part C)	**Typically $0-$330** Coverage varies by plan; patient cost subject to applicable co-pay, co-insurance, and deductible amounts
Medicaid	**$0** Coverage varies by state
Uninsured	**$0**

*When qualifications are met

~98% of patients with out-of-pocket costs pay less than $330. Castle Biosciences offers financial assistance for patients who qualify.

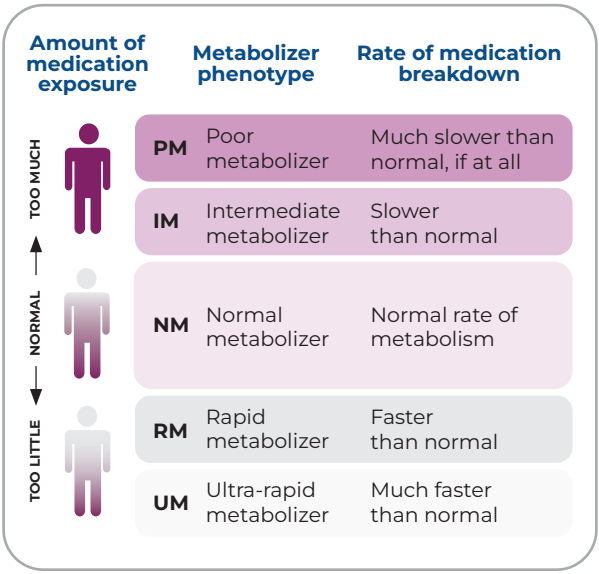
Most people have genetic variations that impact how they metabolize some medications[7,8]

Some medications, including those used to treat mental health disorders, have drug-gene interactions that change the rate at which the body breaks them down, potentially resulting in exposure to more or less medication than intended.

Medications are not one size fits all

PGx considers how genes affect medication efficacy and provides personalized guidance to find medications and doses that are right for you.



Ask your doctor about IDgenetix to find out if it's right for you

Only your doctor can order an IDgenetix test for you. Your report will be sent to them, so you can review the results together and discuss next steps.
